Chart type- Stacked column chart

Insights:

- Paseo is the top-selling product at **33M**, outperforming all others by a large margin.
- Only Paseo and VTT cross the **20M sales target**, indicating strong market acceptance.
- Mid-range performers (Velo and Amarilla) are close to target but do not exceed it.
- Montana and Carretera remain below expectations, with Carretera being the lowest performer at **13.8M**.
- A clear performance gap exists between the best and weakest products, signalling the need for targeted strategy.

Target Achievement

- **Primary Target (20M):** Achieved by 2 products (Paseo, VTT).
- **Secondary Target (15M):** Achieved by 5 products; Carretera fails to meet both targets.

Steps to Reproduce:

1. Select stacked column chart from build visuals.
2. Pass product to X axis and sum of sales to Y axis.
3. Go to format your visual and changes the values in X-axis.
 - a. Change font style, size, colour.

- b. Turn value button on
 - c. Then turn on the title (change its font style, size, colour).
4. In the same way we can format the Y-axis as well.
5. To set a Target in Visual, select add further analyses to your visual, click on Y-axis constant line (2), apply setting to like add line and name the line, colour the line, set target line giving by values.
6. Go to column- select the product(columns) and choose the colour
7. Turn on the boarder radio button
8. Turn on Data labels radio button
 - a. Under option select the position
9. In format visual go to general and turn on title radio button. Change font style, colour, size and alignment and save it.

Chart type: Cluster bar chart

Insights:

- **Paseo leads the portfolio**, achieving the highest sales (33.01M) and profit (4.8M), exceeding both targets.
- **Only Paseo and VTT** cross the profit target of 1.8M, indicating strong profitability compared to other products.

- **Mid-tier products** (Velo, Amarilla, Montana) have moderate sales but **lower profit margins**, showing room for cost or pricing optimization.
- **Carretera is the weakest performer**, with the lowest sales (13.82M) and minimal profit, needing immediate strategic attention.
- **Sales-to-profit efficiency varies**, as some products show high sales but weaker profit conversion, pointing to operational inefficiencies.
- The overall product performance shows a **significant gap between top and bottom performers**, signalling the need for portfolio balancing and focused improvement strategies.

Chat type: Stacked column chart

Insights:

- **Paseo consistently delivers the highest profit** across all discount bands (High, Medium, Low, None), showing strong resilience even with discounts applied.
- **Low Discount Band yields the highest profits overall**, especially for Paseo (1.61M) and VTT (1.31M), indicating that minimal discounts maximize profitability.
- **High discounts significantly reduce profit** for all products, with Carretera (0.18M) and Velo/Montana (0.45–0.52M) showing notably low profit under heavy discounting.
- **Medium discount levels provide balanced profitability**, where Amarilla (1.19M) and Paseo (1.38M) still perform strongly, suggesting an optimal discount-performance middle point for these products.

- **Carretera is the weakest performer across all bands**, with consistently lowest profit, suggesting low demand sensitivity and minimal returns even without discounts.
- **Products like VTT, Amarilla, and Velo respond well under Low discount band**, showing a noticeable profit boost compared to High and Medium bands—useful for targeted discount strategies.

Steps to Reproduce:

1. Insert → Visualizations → choose **Clustered bar chart** (or **Stacked bar** if you prefer).
2. Populate the fields:
 - **Axis (Y):** Product
 - **Values (X):** Total Profit (the measure)
 - **Small multiples:** Discount Band ← this is the key step
3. The visual will split into tiles — one tile per discount band.
4. Do further formatting visuals.
