ETL The Data

Steps:

1. Open the **Application**
2. Click on **get data**, select the **Excel workbook**, select the data and ok
3. Click on **transform the data**, and **power query editor** will automatically open for cleaning the data.
4. **Power Query:** Is the inbuilt application in power bi, it is an **ETL application**. The Power Query editor represents the **Power Query user interface**. In this user interface, you can add or modify queries, manage queries by grouping or adding descriptions to query steps, or visualize your queries and their structure with different views.

5. This is the data, what I have transformed.
6. Here, **first column project name**, is **cleaned and perfect** there is no repeated or duplicated value in the column.
7. In the **Second sectors column**, also **well cleaned and formatted**.
8. Next **third column looks clumsy**, in the **shortlisted team column**, I found, duplicated, repeated, values and there is something to split the column.
 - a. First **click on the column** then in the **Home tab** select **Split Column** option
 - b. Select **By Delimiter**
 - c. Select **Comma**, on the enter delimiter option, split at **Each occurrence of the delimiter**, click on advance option, select **row**, quote character → **none**, then click on ok.

Split Column by Delimiter

Specify the delimiter used to split the text column.

Select or enter delimiter
Comma

Split at:

☐ Left-most delimiter

☐ Right-most delimiter

☒ Each occurrence of the delimiter

Advanced options:

In the shortlisted team column values are separated as per comma has present in the column, as per my selection: split in to row, as it is split into the rows only.

10. Here, Shortlisted team column has repeated and duplicated values,

11. Select the column, open Home tab, Select By Delimiter, keep custom option in the enter delimiter tab, under that enter open brass symbol,

12. Select split into column; quote character should be null and click on ok.
