Interaction:

In Power BI, "interaction" refers to how selections made in one visual automatically affect other visuals on the same report page by filtering, highlighting, or doing nothing at all.

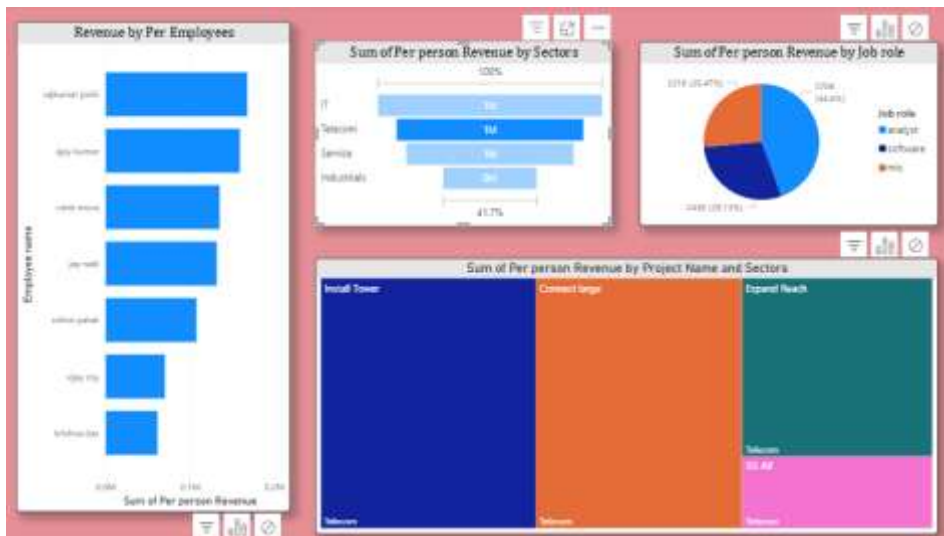

This is the sheet I am going to create interaction between all the chart.

Steps:

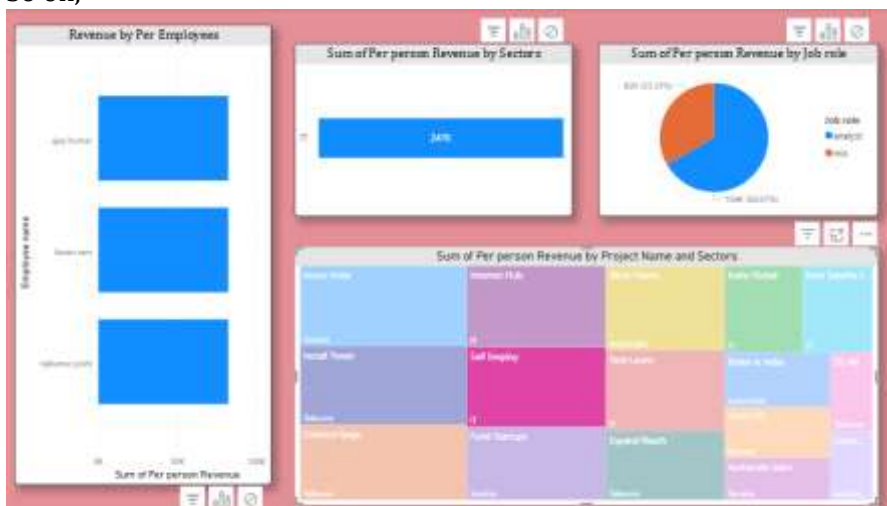

1. Select chart → click on format tab → Click on Edit Interaction
2. Then Click on filter at the top of chart → for all the chart

3. Click other chart → as the same way click filter of all the charts

4. So on,

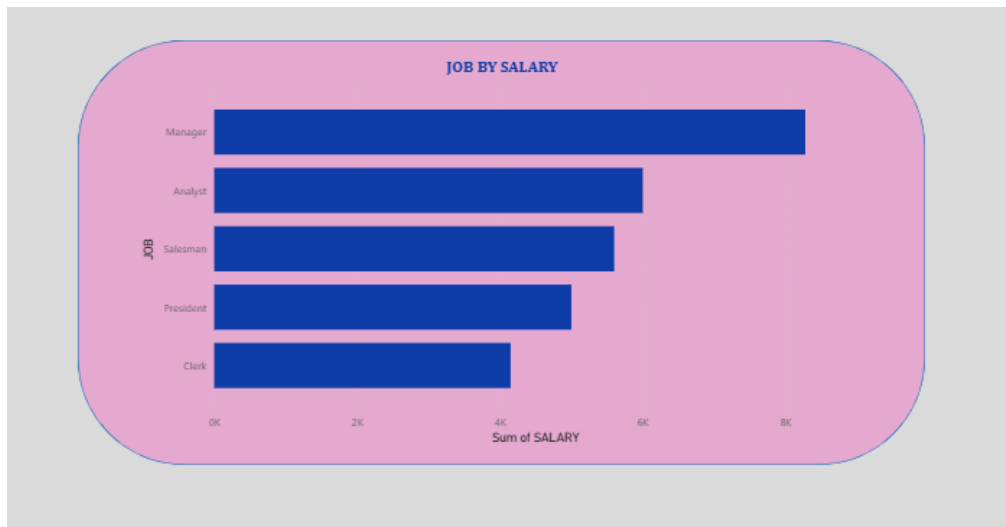

How connect My SQL Workbench to the Power BI?

1. Get data → more → Data bases → MySQL database
2. Enter host name → Enter Database name → click ok
3. Select Database → enter User name → Enter Password → ok
4. Select table → Click On Load

After that if you want extract the particular data

1. Get data → more → database → MySQL Database
2. Enter server name (127.0.0.1:3306) →
3. Enter database name → click on advanced option
4. Write query on sql statements box → ok
5. Load the data

Designing Visual

1. Create on visual → select Insert tab → select shape
2. Colour the shape → Place it on top of visual
3. Click on format tab → Send it backward
4. Properly place visual at the centre of the shape.
5. Select shape and visual at a time with the help of ctrl key
6. Then Right click then select group
