Web scrapping using map and combining two tables

Steps:

1. Go to google
2. Search World Happiness Report Wikipedia
3. Search the data which have stored in the form of Table, if there click on it and copy the URL
4. Open Power BI application and click on get data
5. Then select Web and paste the URL click ok
6. Select the Table then Load
7. Click on Map Visual, Drag and drop the Country/Region into the Location, numerical data to the bubble size.

Note: There are more countries, then better to have continent column for escape from clumsiness of visual, here are the steps: -

1. Search for list of countries by continent and if the information is correct then copy the URL
2. Come back to Power Bi application, click on get data, select web, paste it on it.
3. Select the table, I found something that have to clean so, then I click transform the data.
4. Then Power query has opened.
5. I renamed the table name, and make the first row in the header
6. And I changed the data category like continent into continent, country into country
7. Here, in both the table country is a common column so, I create relationship in between both tables.
8. Like:
9. Go to the Model View.
10. I drag the common column from table 1 and drop to the table 2.
11. One table will appear, there we have to select common columns and, click on both then Ok
12. Then come back to report view, select the bar chart, Continent to the Y axis, Country to the X axis,
13. Here, we can easily understand the data by visual, if click on any continent in bar chart, we can get Continent's country wise GDP per capita in the map visual.

Insights:

1. Data: World Happiness Report
2. In the survey, WHO survey the score by some of factors, which are like, GDP Per capita, Social support, Healthy life Expectancy, Freedom to make life choices, Generosity, Perception of Corruption.
3. According to this data, Finland has the Highest GDP Per capita in the world, and it is in the Europe continent.
4. And Russia has the Lowest GDP Per capita.
5. Asia is the Second highest GDP per capita.
